# GLESEC
COMPLETELY PERSPECTIVE

PATCH MANAGEMENT CONFIGURATION SERVICE (MSS-BRAND)

This document is a briefing that describes the operation and use of the MSS-BRAND, and it is meant for all users of SKYWATCH WEB Platform.

Purpose of this Dashboard

This SKYWATCH Dashboard(s) provides **visibility** to the technical and executive users of SKYWATCH about the **MSS-BRAND** Service and an on-demand **report** for this service (with the information of the dashboard). These are two of the deliverables for this service. There are more consolidated reports that combine the information of this service with other contracted services. Also certain of the parameters defined on this Dashboard are used as indicators to trigger SKYWATCH automations (GLESEC NOTABLE EVENTS – GNE) and this activates the GLESEC OPERATION CENTER(s) (GOC) into action to further investigate and for incident-response.
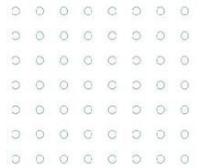

The following presents the SKYWATCH MSS-BRAND.

Detailed Description of functionality of the MSS-BRAND Dashboard

Below the description and use cases of each of the components.

ITEM	DESCRIPTION
Brand	Displays the current brands underneath the company and their associated ID. For the SKYWATCH WEB the refresh rate is once every day. The information represents data from the last 30 days. This information can be used to keep track of the multiple brands under a company.
Security Alert	Displays a list of websites that are seen as security risks and their severities.s For the SKYWATCH WEB the refresh rate is once every day. The information represents data from the last 30 days. This information can be used to watch what websites currently pose a possible risk and should be monitored or taken down.
Cease and Desist Items	Displays a list of websites/modules that were enforced by the company and their scores. For the SKYWATCH WEB the refresh rate is once every day. The information represents data from the last 30 days. This information can be used to monitor which items are currently under investigation and have been enforced, and can tell if the company has changed their content containing Glesec by seeing if the scores have changed.
REPORT	This action button will generate a MSS-BRAND REPORT based on the data of the dashboard with the corresponding TLP AMBER designation.
